Cover Design

A key part of the publication process (and in response to the changing requirements of the book industry), are the standard corporate book covers that Springer introduced for each subject area in which it publishes. These covers provide a strong, corporate brand identity for Springer books, making them instantly recognizable amongst the scientific community. In addition the covers also assist speed of publication, as having standardized versions greatly reduces the time traditionally spent on creating individual book covers for each title.

Make Your Choice

In order to facilitate the production and publication of your article we need further information from you relating to:

- Please indicate if you would like to publish your article as open access with Springer's Open Choice option (by paying a publication fee or as a result of an agreement between your funder/institution and Springer).
- Please transfer the copyright, if you do not publish your articles as open access.
- Please indicate if you would like to have your figures printed in color.
- Please indicate if you would like to order offprints.

Answering the questions on the next few pages will take approximately 10 minutes of your time.

Please note: Be sure to complete the entire process until you get to the confirmation page. The subsequent production of your article depends on the finalization of the MyPublication process.

Please see our FAQ page if you have questions or problems completing the forms.

ORIGINAL PAPER

Evolving classification of agents' behaviors: a general approach

Abstract By recognizing the behavior of others, many different tasks can be performed, such as to predict their future behavior, to coordinate with them or to assist them. If this behavior recognition can be done automatically, it can be very useful in many applications. However, an agents' behavior is not necessarily fixed but rather it evolves/changes. Thus, it is essential to take into account these changes in any behavior recognition system. In this paper, we present a general approach to the classification of

1 Introduction
Recent theories claim that a high percentage of the human brain capacity is used for predicting the future, including the behavior of other humans (Mulcahy and Call 2006). Recognizing the behavior of others in real-time is a significant challenge in different tasks, such as to predict their activity, state or future actions, to coordinate with them or to assist them.
